Flotilla - Light

PIM033

The Light module detects ambient light level. It's ideal for use in a weather station, keeping track of light levels in your greenhouse, or reminding you when you've left the lights on in your house.

Features:

- Detects ambient light level
- TSL2581 sensor
- Micro USB connector

Find Flotilla Cookbook recipes that use the Light module at http://learn.flotil.la/cookbook/ or use Light with Rockpool at http://flotil.la/rockpool/

Or use our Python Flotilla API to control the Light module.

Note: Flotilla modules require a Dock and Flotilla ropes (USB micro B to micro B cables)
